

Yandex.Terra and Ingenix Group® combine their efforts for the execution of joint projects in the field of geological and geophysical data processing and interpretation.

Moscow, February 25, 2014. Yandex.Terra (Seismotech, Ltd) and Ingenix Group® (GPB-Resource, LLC) companies signed a partnership agreement. The purpose of the agreement is to unite resources and technologies for increase in productivity and improving of the quality of seismic data processing and interpretation. The cooperation includes joint execution of works and complex provision of services in the field of geological and geophysical data processing and interpretation, as well as joint consulting services. Close interaction of experienced professionals from both companies provides the opportunity for interpreters to participate at the very early stages of the processing, so as for the geophysicists to take into account the goals and tasks of the further interpretation, which allows to coordinate optimally the actions in order to achieve the highest possible quality of the obtained results.

Ingenix Group® is a specialized consulting company, being a part of Gazprombank group, which provides integrated services for Russian oil & gas companies in upstream projects' assessment and management since 2009. Ingenix Group® has extensive experience in seismic data and GIS in-depth interpretation, creating geotechnical models, oil and gas assets evaluation, risks and geological uncertainties analysis. For each project highly-qualified geologists and geophysicists provide complex approach with individual set of advanced technologies including seismic inversion, seismic facies analysis, spectral decomposition using state-of-the-art software.

Yandex.Terra has its own patented and certified full-featured domestic software complex called Prime for interpretative processing of 2D/3D/3C seismic data, as well as the long experience of its team in the area of on-shore and off-shore seismic data processing. The current capacity of the Yandex.Terra data processing center is 4000 computing cores; it is one of the largest Russian service centers in the oil and gas industry. The geography of practical experience in Prime software includes more than 100 land and marine projects in various regions of the world.
